Introduction to compressible fluid flow in SearchWorks catalog

Compressible flow (gas dynamics) is the branch of fluid mechanics that deals with flows having significant changes in fluid density. Gases, mostly, display such behaviour. While all flows are compressible, flows are usually treated as being incompressible when the Mach number (the ratio of the speed of the flow to the speed of sound) is less ...

Compressible flow - Wikipedia

Compressible flow Even if air and other gases appear to be quite compressible in our daily doings, we have until now only analyzed incompressible flow and sometimes applied it to gases. The reason is "as pointed out before" that a gas in steady flow "prefers to get out of the way" rather than become compressed when it encounters an obstacle. Unless one entraps the gas, for example in a ...
